

Pocket Guide  
to the Finest  
Registers  
for Every Type  
of Installation

## IMPORTANT

The "Pocket Guide" is not a complete catalog of the H & C line, which includes registers and furnace accessories for every type of warm air installation. This pocket catalog has been issued simply that you might have a quick, convenient, easy-to-carry means of reference to data pertaining to those items used in the majority of installations. For information in regard to other register sizes and items not listed here please refer to H & C Complete Register Catalog. A separate pocket catalog is available on furnace accessory items, showing the complete line of regulators, chain plates, chain, pulleys, damper regulators, dampers, damper clips and tips, etc.

H & C also manufacture perforated and cast ornamental grilles in a wide variety of designs and metals. Grilles are shown in a separate catalog.

Any of these catalogs will be furnished to the trade upon request.

The popular priced H & C Automatic Heat Control has received wide favor. Information and prices upon request.

# These Factors Definitely Point to the Wisdom of Standardizing on the H & C Line

## A Complete Line

The H & C line is the most complete line of fine registers to be found anywhere. No matter what type of installation you may encounter, H & C offers a style and type ideally suited for the purpose.

## Each Item Exceptionally Well Made

From a simple comparison it will be quickly noted that H & C registers are decidedly superior—not only by reason of better design, but because of their finer finish, and the evidence of careful, skilled workmanship throughout.

## Patented Pinched-Back Fretwork Provides Greater Air Capacity

Compare the two illustrations. The upper view shows the H & C method of completely pinching back the fretwork; the lower indicates the ordinary method. Obviously the former greatly decreases air resistance, and provides greater air capacity. By actual check, the difference is seldom less than 10%, and usually it is considerably more.

## Packed for COMPLETE Protection

Each register is so carefully packed (individual cartons) that it is bound to reach the point of installation unmarred.

# FLOOR REGISTERS

No. 200 Patented

Judged from any or all angles No. 200 is the finest floor register on the market. It is not only unequalled in air capacity, but is also exceptionally strong, rigid and durable. These qualities are derived both from the pinched back fret-work which adds considerably to the strength and rigidity of the face and from the sturdy construction of the register body. Supporting bars of heavy gauge steel reinforce the face. Valves have solid trunnions securely fastened to each end, insuring free and easy operation and long life. The wide body flanges are turned outward, removing strain from the register face and distributing it to the floor.

† For other sizes see H & C complete catalog.

\* For sand finishes add 10% to list prices.

<sup>1</sup> Most popular in Lacquered Antique Bronze (LAB). Also available in Lacquered Oxidized Copper (LD2) and Lacquered Brass (LF).

<sup>2</sup> When ordering state whether light, dull, or statuary bronze finish is wanted.

# FLOOR REGISTERS

No. 270  
Pebble — Semi-Steel

Attractively designed and finely finished, No. 270 has found considerable favor with those who prefer registers with cast faces. Beveled edges permit installation without recessing. The pebbles protect the finish from surface wear. Castings are sufficiently heavy to insure adequate strength. Multiple valve body of unbreakable steel is similar to No. 200

series. Cold air faces to match (Class No. 280) are shown on Page 7.

For Pebble faces only, without register bodies, specify No. 272.

Made in the following sizes only.

## AIR CAPACITY, LIST PRICES AND CASE LOTS, No. 270

| Opening Size | Air Capacity Sq. In. | Black Japan | Lacquered Dull Bronze (LA5) | Number in Case |

# COLD AIR FACES

No. 255

Patented

Adequate strength is insured in this special low-priced steel Cold Air Face by heavy braces permanently spot welded to the face. Wide margins overlap the opening. No careful fitting is required; no fastening in place is necessary.

Large Air Capacity is afforded as shown in table below.

H & C Medium Dark Oak finish matches the average oak floor in color and grain. Furnished in nickel, brass and bronze finishes as well as those shown below.

<sup>1</sup> Most popular in Lacquered Antique Bronze (LAB). Also available in Lacquered Oxidized Copper (LD2) and Lacquered Brass (LF).

# COLD AIR FACES

No. 265 "NO-FLEX"

Two features in particular recommend this improved grid type cold air face; (1) Large air capacity; (2) Shallow depth—an important factor where single flooring is used.

Structural superiorities: Narrow mesh ( $\frac{1}{16}$ " x  $1\frac{7}{16}$ ") avoids "Heel trouble." Flush intersections and square upper edges improve appearance and provide better walking surface. Members are carefully aligned. Margins are straight as a die—narrow for close installation—beveled for strength. Welding on under side makes corner joints invisible.

Most popular in Medium Dark Oak Finish. Furnished in nickel, brass and bronze finishes as well as those shown below.

† For other sizes see H & C complete catalog.

<sup>1</sup> Most popular in Lacquered Antique Bronze (LAB). Also available in Lacquered Oxidized Copper (LD2) and Lacquered Brass (LF).

# COLD AIR FACES

No. 280

## Pebble — Cast Iron

This heavy Cold Air Face is most popular in LA5 finish (Lacquered Dull Bronze). The pebbles protect the finish from surface wear. Beveled edges make countersinking unnecessary. Narrow margins permit installation close to baseboard. Matches in design No. 270 Floor Register shown on Page 4.

Made in the following sizes only.

## AIR CAPACITY, LIST PRICES AND CRATE LOTS

# COLD AIR FACES

No. 250

This heavy-duty, unbreakable steel Cold Air Face is made in all standard sizes up to 38" x 42". It is unsurpassed in air capacity.

The sturdy reinforcing framework is bolted to the face plate and is removable. The overlap of the face margin eliminates necessity of accurate fitting. Furnished in brass, nickel, and bronze finishes as well as those shown below.

When desired unbraced for sidewall or ceiling use, specify "No. 250 N.B." (not braced).

# BASEBOARD REGISTERS

## No. 110 SERIES With Removable Face

The attractive design of this register, plus its large air capacity and fine workmanship, have made it extremely popular. Installers will find that the large air capacities shown below make possible substantial savings in register costs. For example, size 8 x 12 has free face area equal to capacity of 10" pipe. The face is removable from frame by a quarter turn of the locking buttons. Height from floor to stackhead opening is 2 $\frac{1}{4}$ ".

\* For sand finishes add 10% to list prices.

<sup>1</sup> Most popular in Lacquered Antique Bronze (LAB). Also available in Lacquered Oxidized Copper (LD2) and Lacquered Brass (LF).

<sup>2</sup> When ordering state whether light, dull, or statuary bronze finish is wanted.

# BASEBOARD REGISTERS

## NO. 120 SERIES With Removable Face

This register differs from the 110 Series baseboard register in that it is made to be installed with the stackhead overlapping the frame. Those who prefer this method of in-

stallation will find this register ideal — combining as it does an extremely attractive face design with unusually large free area, a quickly detachable face, and a valve and operating mechanism with extremely smooth action. Plenty of clearance is left for the stackhead, eliminating all danger of valve interference. The stackhead opening is  $2\frac{1}{4}$ " from the floor line.

# BASEBOARD REGISTERS

## No. 130 Series With Removable Face

(Formerly manufactured by Tuttle and Bailey Mfg. Co.)

No. 130 Series, formerly known as Style 902

The No. 130 Series is a popular line with those who prefer a plain lattice register which is installed with stackhead overlapping the register frame. The stackhead opening is  $2\frac{1}{8}$ " from the floor line.

<sup>†</sup> Last figure and fraction indicate depth of stackhead (outside).

\* For sand finishes add 10% to list prices.

<sup>1</sup> Most popular in T & B Tanbo Antique (T.A.) and H & C Lacquered Antique Bronze (LAB). Also available in Lacquered (Tanbo) Oxidized Copper (LD<sup>2</sup>), Lacquered (Tanbo) Brass (L.F.), and other Tanbo finishes.

<sup>2</sup> When ordering state whether light, dull, or statuary bronze finish is wanted.

# BASEBOARD REGISTERS

## NO. 150 SERIES With Removable Face

Among those who prefer the plain lattice design this register has long been a favorite. The oblong perforations and the completely pinched-back fretwork result in air capacity that is exceptional in registers of

plain lattice design. The face may be easily and quickly released from the frame by a quarter turn of two locking buttons at the top. As in the Nos. 110 and 170 Series baseboard registers, slots are provided in the frame flange for convenient fastening to stackhead. Height from floor to stackhead opening is  $2\frac{1}{4}$ ".

# BASEBOARD REGISTERS

## NO. 160 SERIES With Non-Removable Face

This Series combines the economy of a one-piece register with a conservative plain lattice face design. The fretwork is formed back affording large free air capacity as will be noted below. Valve is so fastened to frame that it cannot become detached and fall into the pipe. Valve control is positive and dependable. A turn of the screwdriver adjusts the valve tension.

Distance from floor to stackhead opening conforms to the standard of  $2\frac{1}{4}$ ".

<sup>2</sup>When ordering state whether light, dull, or statuary bronze finish is wanted.

# BASEBOARD REGISTERS

## NO. 170 SERIES With Removable Face

This register, with quickly detachable face is made in formed bar design to give the greatest possible free face area consistent with proper protection of opening and attractive appearance.

Size 8 x 12 has free face area equal to capacity of 10" pipe. See table below for air capacity.

The vertical bars are formed double thickness and are sufficiently deep to afford more than adequate strength.

Height from floor to stackhead opening is 2 $\frac{1}{4}$ "

# BASEBOARD REGISTERS

## No. 190 SERIES With Non-Removable Face

Where the utmost in economy is desired, No. 190 is the ideal register. Having a non-detachable face, it sells at lower prices than two-piece registers, and further substantial savings may be made by taking advantage of its large air capacity as shown below. No. 190 conforms in every way to the high standards of H & C quality. The distance from the floor to stackhead opening is  $2\frac{1}{4}$ ".

# SIDEWALL REGISTERS

## No. 330 With Removable Face

(Formerly manufactured by Tuttle and Bailey Mfg. Co.)

No. 330, formerly known as Style 302

This two-piece sidewall register is made only in horizontal setting. The edges of the stackhead can be turned over the outer frame just as in No. 130 Series Baseboard Register, formerly known as Style 902. The deep flange on the rear of the register face fits snugly into the stackhead.

\* For sand finishes add 10% to list prices.

<sup>1</sup> Most popular in T & B Tanbo Antique (T.A.) and H & C Lacquered Antique Bronze (LAB). Also available in Lacquered (Tanbo) Oxidized Copper (LD<sup>2</sup>), Lacquered (Tanbo) Brass (LF), and other Tanbo finishes.

<sup>2</sup> When ordering state whether light, dull, or statuary bronze finish is wanted.

# SIDEWALL REGISTERS

Nos. 340 and 350

No. 340 Horizontal

Provided with removable flange for fastening to stackhead.

The valve opens full  $90^{\circ}$  and swings on an adjustable friction hinge that assures positive, quiet operation.

These registers have heavy corrugated fretwork and convex margins, which not only add to the beauty of the design, but also serve to cover inequalities in the plaster.

No. 350 Vertical

# SIDEWALL REGISTERS

## Nos. 310 and 390

No. 310 Sidewall Register conforms in design with Nos. 110 and 120 series baseboard registers.

The No. 390 Register matches in general appearance the No. 170 and No. 190 baseboard registers.

No. 310

No. 390

Both No. 310 and 390 lines are made for horizontal setting only. Their free air capacity is so great that sizes larger than 8 x 12 are not necessary. Both lines are furnished with removable flange for fastening to stackhead.

Valve swings full 90°, is easily adjusted, and positively controlled in any position.

a Sizes 6 x 10 and 6 x 12 No. 390 are furnished with curved valves.  
<sup>1</sup>, <sup>2</sup>—See Classes 340 and 350, page 18.

# COLD AIR INTAKES

The three Baseboard Cold Air Intakes shown below match in design the several lines of baseboard and sidewall registers described on previous pages. In each the openings extend close to the floor, making them exceptionally efficient in removing cold air.

No. 651 Matches Nos. 110-120-310

No. 655 Matches Nos. 150 and 160

No. 657 Matches Nos. 170-190-390

# COLD AIR INTAKES

No. 658 and 608

(Formerly manufactured by Tuttle and Bailey Mfg. Co.)

No. 658 Convex, formerly known as Style CX-92

No. 608, formerly known  
as Style N-92

No. 608 is made with  
projections from the  
wall varying from 4  
to 6 $\frac{3}{4}$ ".

Also furnished in  
nickel, brass and  
bronze finishes.

# ADJUSTABLE VENTILATORS

Nos. 2250 and 2255

No. 2250

Made to carry surplus heat from a lower to an upper room. Ventilators are complete, ready for installation, each consisting of one black japanned floor register, and one white japanned face, connected by a three-piece tin box

which is adjustable from 5 to 12 inches in depth.

Easy to install. Allows a maximum of heat to pass through. Packed one in a carton, fully assembled, collapsed to 5".

Class 2255 Ventilator is made for use with double heater stoves, the warm air pipe from the stove being connected to a six-inch opening in the ceiling plate of the ventilator.

No. 2255

# FORCED AIR REGISTERS

The H & C line of Forced Air Registers includes Baseboard and Sidewall Registers and Return Air Intakes, all of which are available in the three designs shown below.

No. 50 Grille Design

No. 40 Grille Design

No. 30 Grille Design

The Sidewall and Baseboard Registers are made with two types of frames: the 3-piece type which embodies features making it particularly well suited for new construction, and the 1-piece type especially adapted for old-house work, or for new house work where the refinements of the 3-piece construction are not necessary.

# FORCED AIR REGISTERS

## ADVANTAGES OF FLAT TYPE GRILLE

The most up-to-date engineering knowledge available, plus years of practical experience, has led us to confine our production of forced air registers to those having a grille face stamped from heavy gauge steel, for the following reasons:

1. The flat grille face may be easily decorated to match or harmonize with the interior, resulting in an extremely inconspicuous installation.
2. A flat grille does not readily collect dust.
3. A flat grille may be easily cleaned or re-decorated in place.
4. This type of grille is strong and rigid and not easily dented — an important consideration if the register is located near the floor.
5. A flat grille stamped from heavy gauge steel will not easily rust. Due to the high degree of humidity inherent in air conditioning, this is an essential requirement.
6. This type of grille offers just enough resistance to the air to do two things which are essential to the satisfactory functioning of a forced-air system:
  - A. The velocity of the air entering the room is reduced to the proper point.
  - B. The air is diffused over the entire face of the register, causing it to enter the room on a nearly horizontal plane.
7. A flat steel grille does not cause any audible noise, regardless of the velocity of the air.

# FORCED AIR REGISTERS

## TWO TYPES OF SIDEWALL REGISTERS

**3-PIECE TYPE.** This register consists of a frame, an inner detachable flange, the grille face, and valve.

Three-piece Sidewall Register Construction

The frame has fastening lugs extending on each side sufficiently to span two or more studs on 16" centers. The frame is fastened directly to the studs, eliminating all special carpentry work and resulting in a rigid, inexpensive installation. The stackhead is bent over the frame and permanently locked in place by means of the detachable flange.

A cardboard face is furnished with each register. This is installed before the plastering, preventing any damage to the interior of the duct. The installation is completed by substituting the grille face for the protective cardboard face. The edges of the face, which are beveled, overlap the outer frame  $\frac{1}{8}$ " all around, completely concealing the joint between the frame and plaster.

**1-PIECE TYPE.** This register consists of a grille face and valve, and a detachable flange. The stackhead is bent over the flange, and the grille face is then drawn up tightly to it by means of the two screws, holding the register firmly against the wall. The grille face has ample margin to cover the opening in the wall surrounding the stackhead, thus permitting this type of register to be installed in either old or new houses.

# FORCED AIR REGISTERS

## TWO TYPES OF BASEBOARD REGISTERS

**3-PIECE TYPE.** This register consists of a frame, inner detachable flange, the grille face, and valve. The frame has a depth all around of  $\frac{7}{8}$ ". It is installed after the plastering is completed. The stackhead is permanently locked to the frame by means of the detachable flange, after which the installation is finished by attaching the grille face by means of the four screws.

**1-PIECE TYPE.** This register has the grille face and frame in one piece. It is quickly installed by simply screwing to the baseboard. The stackhead slips over a flange which is permanently welded to the face. The frame has a depth all around of  $\frac{7}{8}$ ".

### Details of Construction

All H & C forced air registers which have valves use the improved hinge especially developed for this type of work. This hinge holds the valve securely in any position and yet operates smoothly with a minimum of effort.

The valve is of sufficiently heavy steel to insure its closing tightly under all conditions.

The registers are so constructed in every detail that they will last indefinitely even under the most severe conditions.

# FORCED AIR REGISTERS

## 3-PIECE SIDEWALL REGISTER

No. 3331

With No. 40 Grille, Class No. is 3341

With No. 50 Grille, Class No. is 3351

SEE PAGE 24

An ideal register for new house work, providing a permanently streak proof installation. The extension arms are fastened directly to the studs, thus eliminating all special carpentry work. Frame has depth of  $\frac{3}{8}$ ". Grille face overlaps frame  $\frac{1}{8}$ ", effectively concealing the plaster joint. Edges of face are beveled, resulting in a very pleasing appearance. The grille face is readily removed for cleaning or redecorating.

This style register is also available with grille face setting inside, instead of overlapping, the frame. For this construction specify "Flush Type" registers.

## 1-PIECE SIDEWALL REGISTER

No. 3350

With No. 30 Grille, Class No. is 3330

With No. 40 Grille, Class No. is 3340

SEE PAGE 24

This register is designed primarily for old house

# FORCED AIR REGISTERS

work. The face has a margin of  $1\frac{3}{8}$ ", amply covering the edges of the wall opening. It may also be used on new house work where a removable face is not essential. Heavy slotted flange is provided for fastening to stackhead, making a simple, quick installation. See Page 26 for details of installation.

For very inexpensive sidewall registers adaptable to forced air use, in sizes 6 x 10 and 6 x 12, refer to Class No. 390 Sidewall Register. (Page 19).

To determine the proper size register to use under all conditions, refer to Chart on Page 34.

# FORCED AIR REGISTERS

## 3-PIECE BASEBOARD REGISTER

No. 3141

With No. 30 Grille, Class No. is 3131

With No. 50 Grille, Class No. is 3151

SEE PAGE 24

This register provides a permanently streak-proof installation, as the stackhead is securely locked to the frame by means of a detachable flange. The grille face is easily removed for cleaning or redecorating. The frame has a depth all around of  $\frac{1}{8}$ ". The distance from floor to stackhead opening is  $\frac{5}{8}$ ". This type register is adapted to installations where the top of the register sets flush with or projects above the baseboard. For baseboard installations in which the baseboard is higher than the desired register height, 1-piece sidewall registers may be used. Details of installation are explained on Page 27.

## 1-PIECE BASEBOARD REGISTER

No. 3150

With No. 30 Grille, Class No. is 3130

With No. 40 Grille, Class No. is 3140

SEE PAGE 24

Somewhat less expensive than the 3-piece register,

# FORCED AIR REGISTERS

this register permits a very simple, satisfactory installation in either old or new house work, when a removable grille face is not essential. Frame depth all around is  $\frac{7}{8}$ " and distance from floor to stack-head opening is  $\frac{5}{8}$ ". See Page 27 for details of installation.

For very inexpensive baseboard registers adaptable to forced air use, in sizes 6 x 10 and 6 x 12, refer to Class No. 191 $\frac{1}{4}$  Baseboard Register (Page 15).

To determine the proper size register to use under all conditions refer to Chart on Page 34.

Add 1  $\frac{1}{4}$ " to each dimension.

# FORCED AIR REGISTERS

## BASEBOARD RETURN AIR INTAKES

No. 3650

With No. 30 Grille, Class No. is 3630

With No. 40 Grille, Class No. is 3640

SEE PAGE 24

The return air intakes of this series have a depth of  $\frac{7}{8}$ " and are designed to be used where the intake extends above the top of the baseboard. A flange, welded to the intake, engages the duct thus making the connection. The bottom margin is narrow ( $\frac{3}{4}"), to facilitate the circulation of the return air.$

No. 3655

With No. 30 Grille, Class No. is 3635

With No. 40 Grille, Class No. is 3645

SEE PAGE 24

A flat intake, designed for installations in which the baseboard height is greater than that of the intake. Furnished with or without flange for making connection with duct. Unless otherwise specified, intakes without duct flanges will be furnished.

**OTHER INTAKES:** Any of the standard forced air registers may be had without valves and are thus suitable for intakes. Often, as in bedrooms, the intake should have a valve and in such cases regular forced-air registers are very suitable.

# FORCED AIR REGISTERS

**For Correct Size Forced Air Registers Use Chart Below**

This new chart is based on the most recent and up-to-date information available on the flow of air through a grille. The velocities shown are those which would be obtained by an anemometer placed against the register face. The figures shown are applicable to both the plain lattice and the fancy design grills shown on Page 24.

# AUTOMATIC HEAT CONTROL

No. 1000 (60 cycle)

No. 1000C (25 cycle)

(60 cycle furnished, unless otherwise specified)

The H & C Automatic Heat Control is a high grade, low priced Automatic Furnace Regulator embodying features usually found in only the most expensive units.

1. Gears are of hardened steel, accurately cut.
2. The room thermostat is protected from all arcing, thus greatly prolonging its life.
3. The contact points are in the motor, and are operated by cams, insuring positive action and long life.
4. The arms are readily set to stop in any position.
5. The transformer is a separate unit, which greatly simplifies installation.
6. The motor operates in  $5\frac{1}{2}$  seconds and yet has plenty of reserve power.
7. Motor bearings are self oiling.
8. The motor is of the induction type — no brushes to cause trouble.
9. The set is 100% complete.
10. The room thermostat is adjusted at the factory to agree with the thermometer, which is extremely accurate.
11. The sensitive thermostat is so constructed that dust can not reach the contact points, thus eliminating the chief cause of thermostatic trouble.

# WARM AIR DAMPERS

Nos. 506-514

Reversible Stem

Patented

These sturdy, well-made steel dampers (formerly sold under the trade name STAR) have been very popular items with the furnace trade for many years. Stem enters either side of disc. Embossing makes the disc rigid. Packed  $\frac{1}{2}$  gross to the carton, on all sizes except 14" which are packed  $\frac{1}{4}$  gross to the carton.

# DAMPER REGULATORS

## Complete Set No. 70 $\frac{3}{8}$

H & C  $\frac{1}{4}$ " and  $\frac{3}{8}$ " damper regulators for ventilating and forced air heating ducts are regularly furnished in complete sets with all parts, including regulator, a pair of combination regular and splitter bearings necessary screws and rivets, furnished in one envelope. This method of packaging makes sure that all parts are at hand when needed. Separate parts available as ordered.

Regulators are cadmium plated. Positive adjustment provided. Bearings are unbreakable malleable iron. They may be used for either regular or splitter dampers by simply reversing their position.
